SULFATE FREE
Sodium Lauryl Sulfate (SLS) is a strong detergent that cuts grease and makes hair products lather. For some, sulfates can cause skin and scalp irritation. Over-using sulfates can also cause dryness and damage in certain hair types.

PARABEN FREE
Parabens are the most commonly used preservatives in personal care products. They stop bacteria and fungus from growing in beauty products. There are some concerns that parabens are linked to causing cancer. Although unsubstantiated, this claim is making paraben-free products more desirable amongst consumers.

WHEAT FREE
People with wheat sensitivity should avoid products that contain this ingredient. Some people who suffer from eczema also find their scalps feel better if they avoid wheat in personal care products.

OAT FREE
Oats are healthy for hair and scalp however people with oat sensitivity should avoid products that contain the ingredient. Some people complain of inflamed skin, hives, or eczema if they use products containing oats.

SODIUM CHLORIDE FREE
Sodium Chloride is a natural salt; it is used in hair products to adjust the viscosity. Over usage can strip hair of natural oils leaving it dull and dry.

SILICONE FREE
Silicone coats hair to make it appear smoother, less frizzy and shinier. Water-soluble silicones can be easily washed away but non-soluble silicones can cause build-up and be damaging to hair and scalp.
